

# UI Builder for Microsoft Access

## Essentials for Every MS Access Database

Microsoft Access is used by millions of businesses worldwide to support essential business functions like tracking customers, employees, orders, and inventory. Creating a simple Access database for data entry is easy, but taking your database application to the next level requires expertise and effort.

The most commonly needed features for Access-based business applications are:

- Menus to help users navigate and perform their work without remembering form, query, and table names and locations.
- A look and feel that is consistent with your company's branding.
- The ability to track additions, changes, and deletes made to records in your database.
- Simple troubleshooting tools to minimize the time to diagnose and resolve user issues.
- Control over user access to forms, queries, reports, tables, and VB code.

For years, Access users and developers have spent extensive amounts of time building upon the functionality provided by Microsoft, recreating the same key features needed for any basic business application. UI Builder for Access provides a powerful yet simple framework to incorporate advanced user interface, troubleshooting, and auditing capabilities into your Access-based database applications – without being an expert in Visual Basic. With UI Builder you get the essential capabilities your application needs out of the box, allowing you focus your energy on designing and creating the forms and reports specific to your business needs.

### SAVE TIME WITH FEATURES OUT-OF-THE-BOX

When you are developing or enhancing your Microsoft Access-based business applications, the pivotal question you must ask yourself is, "why recreate the wheel?" UI Builder offers advanced features any Access database needs, saving you time and energy you can focus on more important activities. To find out how much time and money you can save with UI Builder, we encourage you to take advantage of our [free ROI calculator](#).

### KEY BENEFITS

- Quickly gain rich functionality that is fully tested and proven
- Focus on your business instead of recreating common Access functionality
- Incorporate UI Builder into your existing database, or jump-start your next Access project
- Minimize user frustration and training with a highly intuitive interface
- Reduce the time to maintain and troubleshoot your Access databases

### FEATURE HIGHLIGHTS

- Multiple Web-2.0 looking menu layouts and unlimited custom color schemes
- More than 25 pre-defined menu button commands that require no VB coding
- Full source code access
- Lifetime support and updates
- And many more features!

### SYSTEM COMPATIBILITY

- Microsoft Access 2000, 2002, 2003, or 2007
- Compatible with the MDE and ACCDE formats, and the free runtime version of Access from Microsoft
- Compatible with MySQL® Server and Microsoft SQL Server™ linked tables (optional)

# UI Builder for Microsoft Access

## UI Builder Features and Editions

### WHAT OUR CUSTOMERS HAVE TO SAY

*"UI Builder has saved me many hours of development time...the end users appreciate the ease with which they can navigate through the application."*

**K. Sherman—Donaldson Company**

*"An easy to use system that provides professional looking results. 100% recommended."*

**jap142**

*"You have great tools, probably the best I have seen. It's saving me a lot of time in my development of custom apps."*

**M.C., Developer**

### FEATURES FOR NEW MICROSOFT ACCESS USERS

To move beyond simple data entry forms, Access users frequently spend hours learning Visual Basic, posting questions on message boards, and dissecting example databases to learn how to deploy more advanced features. UI Builder for Access saves you the time and frustration so you can focus on your primary job responsibilities. For users just starting to learn how to build Access databases, UI Builder can help you with:

- Numerous Visual Basic Assistants that employ Q&A-style wizards to create VB code for you.
- Pre-packaged Visual Basic functions to retrieve Windows usernames, display progress bars, and log application events/errors..
- Full access to UI Builder source code to learn how advanced Access features are created.

### FEATUIRES FOR EXPERIENCED ACCESS USERS

Whether you are an experienced developer in other languages taking on an Access project, a seasoned Access developer working on your 50th Access project, or simply maintaining an existing database, UI Builder provide comprehensive features to help you manage and advance your Access database solutions. With UI Builder, you can reduce the time to enhance and maintain your databases while retaining full control over the functionality. Highlights include:

- Support for multi-user environments with automatic table link verification and repair, user-level menus, record-level auditing.
- Event logging and administrator email alerts to easily identify and resolve application issues.
- Numerous configuration settings to modify workstation-level defaults.
- Full access to UI Builder source code to call func-
