

Workflow Builder™ for Microsoft® Access™

Automate Your Business

OpenGate Software

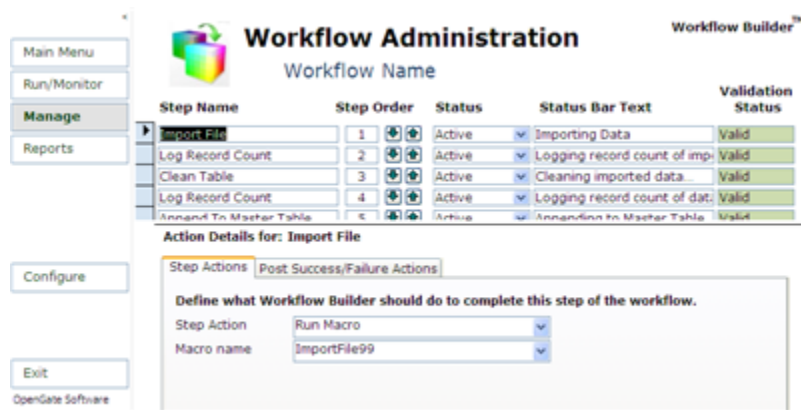

Take Your Microsoft Access Solution to the Next Level™

Workflow Builder™ for Microsoft® Access™

Powerful Business Automation Using Microsoft Access

The ability to effectively automate business processes has typically been the domain of costly custom software development, or purchasing a full scale enterprise solution. For businesses without the need or resources to procure an enterprise software platform, the alternatives are to struggle on with highly manual processes, or engage costly contract developers to realize greater efficiency. Workflow Builder for Microsoft Access delivers robust features with the reliable performance you need to improve your business' efficiency:

- Define multiple workflows with distinct process steps
- Execute macros, queries, VB code, or reports
- Define success and failure paths for each workflow step
- Full source code access
- UI Builder - Enterprise Edition included
- Each transaction is fully logged
- Condition-based administrator alerts
- Compatible with SQL Server 2005 and MySQL databases
- Support for Access 2002, 2003, and 2007

OpenGate Support

OpenGate Software is committed to support customers before, during, and after they incorporate UI Builder into their existing or new Access database applications. Our customers consistently compliment us on our speed and quality of response to support issues.
